## Procedure laboratory blood analysis

---

Your therapist/practitioner has requested a blood analysis. Below you will find the procedure.

1. 1. You will receive a blood tube, lancing set, lab application form, and shipping materials for return to the lab
2. Fill in the following on the lab application form:
  - Date of blood collection
  - Date of posting of the sample
3. We pass on your name, date of birth, gender, address, e-mail address (or telephone number) to PMO. PMO searches for the nearest blood sample location based on this data.
4. 4. PMO will send you an email with the referral letter or call you about this (if no email address is available)
5. 5. You take to the blood sample location:
  - The referral letter PMO
  - The laboratory form
  - the injection set
  - the tube for the blood
6. After the blood test, take the blood tube and the lab application form with you again.
7. Before sending, do the following:
  - You put the blood tube in the white soft absorbent material.
  - You put this in the leak-proof Seal bag (tape it closed).
  - You put it in the protective cardboard.
  - This will go together with the lab application form in the blue mailing envelope (tape it closed).
8. You deliver this mailing envelope to the post office (no stamps needed).
9. If the analysis has been requested by your practitioner, we report to the practitioner. If you have requested the analysis without the intervention of a practitioner, we will report to you via our website. You will then be informed about this by us.

If you have any questions, please contact Biocoherence at [info@biocoherence.eu](mailto:info@biocoherence.eu) or phone number 036 – 522 41 45

Good luck on behalf of the Biocoherence team!
